

Day 22 – AWS AI/ML Pipeline with SageMaker & Bedrock

Introduction

Machine Learning pipelines automate AI workflows.

Amazon SageMaker

Managed ML platform for training and deployment.

AWS Bedrock

Generative AI platform with foundation models.

Workflow

Dataset → Training → AI Integration → Deployment.

Real-World Project

AI Resume Analyzer using SageMaker and Bedrock.

Security

IAM Roles, encryption, API security, monitoring.

Monitoring

CloudWatch tracks training jobs and model performance.

Advantages

Scalable AI deployment and managed ML workflows.

Use Cases

AI chatbots, analytics, NLP, recommendation systems.

AWS AI/ML Architecture Diagram

AWS AI Services Table

AWS Service	Purpose
SageMaker	Model training & deployment
Bedrock	Foundation models
Lambda	Backend processing
S3	Dataset storage
CloudWatch	Monitoring
